

Clinical Scenarios and Best Practices

- Opioid use disorder
- 52M with AIDS and OUD is referred from hospital for wound care related to an abscess. He has pain related to his dressing change and remains on oxycodone 10mg BID but wants to start MAT during his respite stay.
 - What processes do you need to be able to accept this patient
 - What staff trainings and skills are required
 - Develop a protocol that would allow your program to care for this patient

Clinical Scenarios and Best Practices

- Bed bug infestation
 - Cleaning staff or nursing assistants started the weekly cleaning of the female dorm
 - While changing the sheets, they noticed black dots on the box spring cover.
 - They weren't quite sure what to do

What does your staff do at this point Who do they report this to?

What are next steps?

What is your policy and procedure for detecting and preventing bed bugs?

Were all steps followed?

Lessons learned?

Clinical Scenarios and Best Practices

- IV antibiotics
- 28F with OUD is referred from hospital to complete a 6 week course of IV vancomycin for septic arthritis.
 - What processes do you need to be able to accept this patient
 - What staff trainings and skills are required to care for her safely
 - How would you manage her OUD?
 - Develop a protocol that would allow your program to care for this patient
